TIMBER FIRE DOORSETS

from

Doorfit

Our Experience. Your Solution

A key touch-point

Doors are one of the few life-safety products that we physically interact within a building.

Doorfit's expertise at this key touch-point combines matchless experience in architectural ironmongery and precision joinery into the optimum doorset solution -

Protus Timber Fire Doorsets

Doorfit has an enviable reputation for specifying and supplying high quality products in the areas of architectural ironmongery, timber doorsets, entrance doors and garage doors.

Doorfit
Our Experience. Your Solution

THE SIMPLE & CERTAIN ROUTE TO FIRE DOOR COMPLIANCE

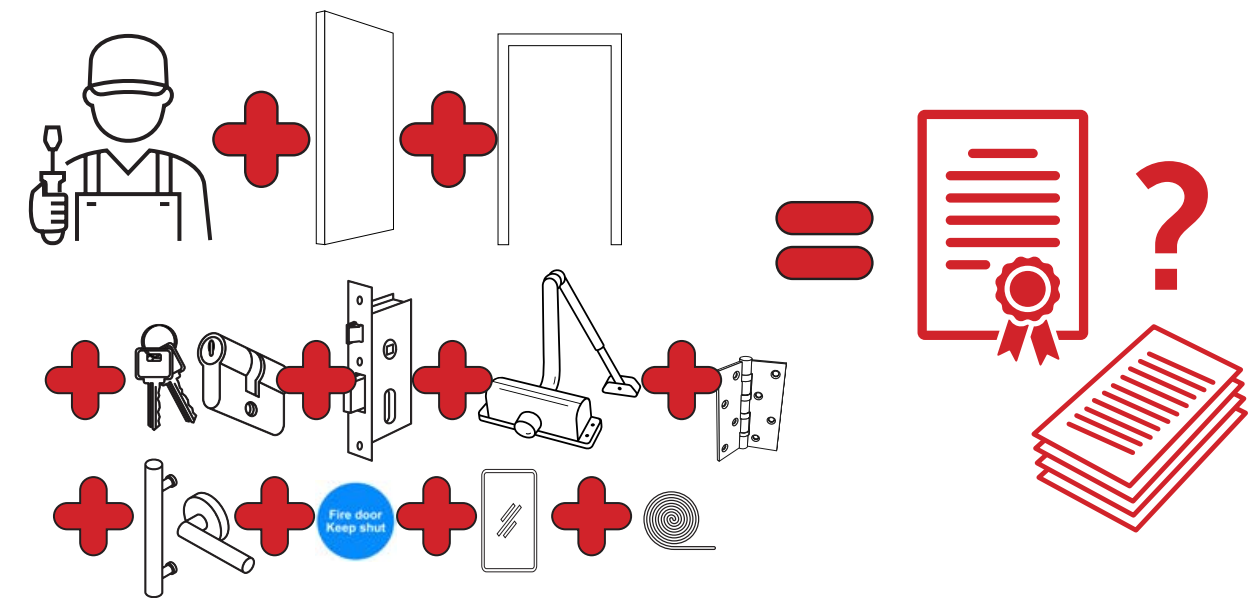

In the wake of Grenfell, demonstrable compliance is central to fire doors for building owners. Doorfit's Protus Timber Fire Doorsets are now the simplest and most certain route to ensure fire doors are certified for all necessary building and fire regulations.

A Fully Certified, Complete Assembly

Protus Doorsets are sold as one, fully-certified, item - a complete assembly of door leaf, frame, seals, vision panels and hardware that is certified compliant to ensure optimal on-site fire safety. Protus' simple compliance enables product traceability as part of the wider objectives of the "Golden Thread" for the lifespan of a building. Protus doorsets have achieved certification for both safety and security with FD30, FD60, FD120, PAS 24 and Q Mark Fire Door Manufacture.

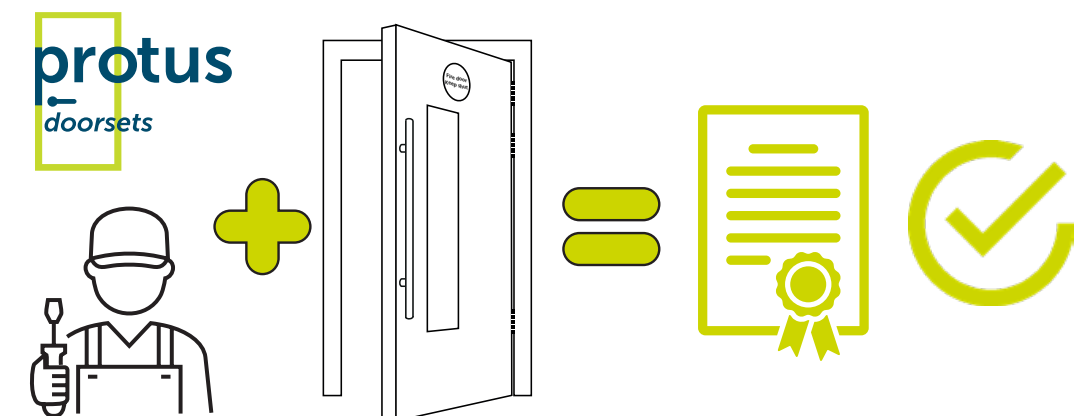

Compliance

High risk or certainty?

Choosing to follow the route of on-site joinery construction is full of risk. Compliance of each component must be ascertained and documented, along with confirmation that the installer has fitted each item as per the manufacturer's instructions. Gaps in the seals? Door to frame gap over 3mm? Correct signage?

Protus Timber Fire Doorsets eliminate the uncertainty.

A VERSATILE & CAPABLE CONFIGURED SOLUTION

Protus can be configured for multiple performance characteristics. Doorfit is adept at working with you to meet requirements across a wide range of applications. We're experts in compliance for fire, smoke, security, acoustics and other key performance characteristics.

Performance

- ✓ FD30, FD60, FD90, FD120 Fire Doors
- ✓ PAS 24 Security
- ✓ Acoustic ratings up to 44dB
- ✓ U values down to 1.4 W/m2K
- ✓ Up to Class 2 Air Permeability
- ✓ Up to Class 2 Water Tightness
- ✓ Up to Class 2 Wind Load
- ✓ Up to Class C5 Repeated Opening

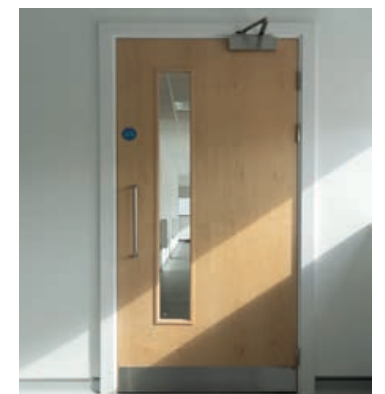

Competence

Experts at your side

Doorsets, whilst inherently simple on one level, become more complex when used in a public setting. Equal Access requirements for visual contrast, approach, access ramps, clear opening widths, closing force, thresholds, zones of visibility are examples of regulations that must be addressed.

Doorfit will ensure you navigate all the required regulations for the optimum solution with every Protus doorset:

- ✓ Fire safety: Approved Document B
- ✓ Security in dwellings: Approved Document Q
- ✓ Access to and use of buildings: Approved Document M
- ✓ Conservation of fuel and power: Approved Document L
- ✓ Resistance to sound: Approved Document E
- ✓ Healthcare settings: Approved Document HTM and HBN

Aesthetics

FULLY FINISHED, PRIMED, VENEER & LAMINATE DOORS

Protus is available in a spectrum of finishes that can be tailored to suit application.

Pure aesthetics with colours and laminates in most BS, RAL, NCS and Dulux Colour Dimensions or hard-working finishes for high traffic areas, including fully encapsulated doors and frames. Specialist anti-bacterial finishes for healthcare settings are also options available with Protus. Doorfit will guide you to the right finish.

Cost-effective

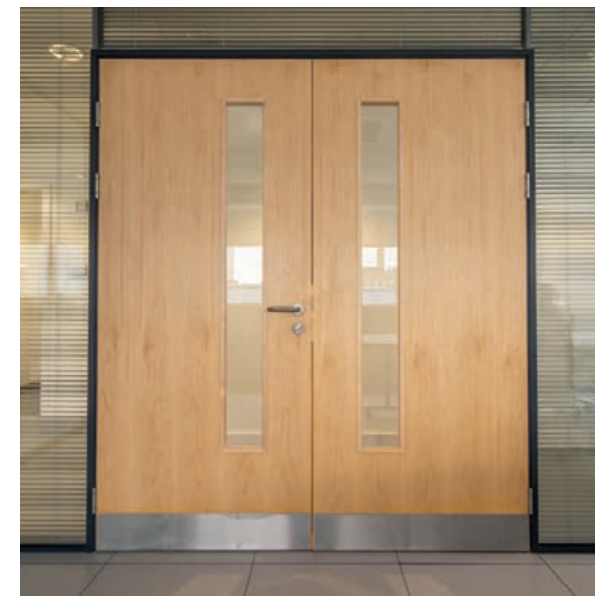

QUICK AND EASY TO INSTALL, LOWER LIFE CYCLE COST

As most of the assembly is completed ahead of time and factory prepared to precise tolerances, Protus Timber Fire Doorsets require minimal on-site fabrication.

This allows installers to make light work of the installation, giving you peace of mind that fire doors are installed according to all necessary building and fire regulations.

Quick to install means a smaller labour element to factor into the overall cost. Simple compliance means lower administration costs and factory production controls ensure the quality needed for an extended lifespan and a lower life cycle cost.

Cost-effective on every level.

Architectural Ironmongery

INDUSTRY EXPERTS

Doorfit has been providing specification and guidance for architectural ironmongery and access control products since its inception, and our experienced personnel are available to assist with all detailed enquiries associated with the specification of hardware including guidance on the right products that adhere to building regulations.

Architects, Designers, Specifiers, Building Contractors, and costing professionals alike, trust the schedules we produce incorporating architectural ironmongery, access control and automatic door closer solutions into Protus.

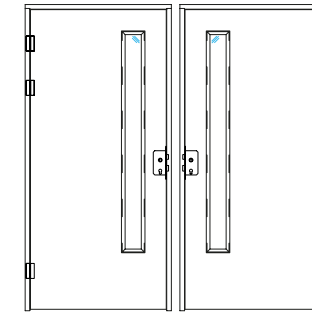

Configurations

Protus doorset design possibilities are almost limitless, however typical configurations in commercial and public settings are shown here for fire doors, non-fire rated doors, acoustic and hospital doors. If you don't see a configuration you require, we can advise on compliance with Part M and other applicable regulations.

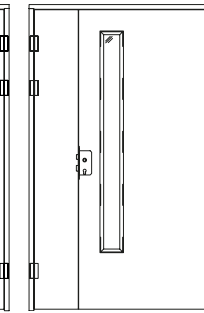

*types shown are suitable for Building Regulations Part M compliance.

PAS 24 Configurations

Fire doors are a legal requirement in flats where doors open onto communal areas shared with other tenants. Flat entrance and communal doorsets are available certified fire rated and with PAS 24 security.

Flat Entrance* and Communal doorsets are available in both FD30S and FD60S.

*External UKCA flat entrance doorsets are available in FD30S only.

Case Studies

Protus Fire Doorsets excel in the Care Sector...

Protus Fire Doorsets featured in two major projects across five sites for West Sussex County Council. The first project encompassed three care homes, Glebelands, The Laurels & Rowans. The homes were part of a refurbishment project that saw Doorfit work alongside building contractors Cheesmur and designers Chalk Creative. Doorfit supplied over 130 bespoke Protus doorsets with compliant architectural ironmongery.

"Doorfit were engaged by Cheesmur on an extremely challenging refurbishment project, with expert joinery advice provided to our production teams from their appointment, into the site measure and through to delivery of the goods which were phased across three locations. Any minor issues were dealt with in a professional manner and conclusion expedited to avoid detrimental effects upon programme." Jason Wickenden, Cheesmur Operations Director.

The second project covered two specialist children's care homes, Seaside House and May House, again for West Sussex County Council. Doorfit was engaged by building contractors Pilbeam Construction and reprised its work with designers Chalk Creative.

- ~200 Protus doorsets with compliant architectural ironmongery
- Single and double doors
- FD30 and FD60 Fire ratings
- Vision panels
- Over-panels and side lights
- Acoustic ratings

Protus Fire Doorsets hit tight 20 day schedule...

Hunter Street Medical Centre, a grade 2 listed building, needed an urgent fire door upgrade. The 25 doorsets were all of a bespoke size, some with side screens and all either FD30 or FD60 rated. The doorsets were finished in a mixture of American White Oak veneer or primed for painting and complete with ironmongery that reflected the needs of those with a disability that would be using the building.

Doorfit worked with the Contractor, Gleeds and NHS services to ensure the pre-hung doorsets would be delivered within the 20 working days needed to minimise disruption to the medical centre.

"With a tight schedule to achieve, Doorfit worked closely with both the on-site and off-site teams ensuring that the technical problems encountered were solved efficiently, enabling the project to be completed on time to the client's satisfaction, which was a great result for us all" On-site Project Manager, Sitec.

Protus are a hole in one with Walmley Golf Club

Doorfit worked closely with Contractors Quantum and the Client to supply bespoke laminate doorsets in a special Polyrey Châtaigner Corte – Epimat finish with beech lipping to the £1.6m refurbishment of their clubhouse. The bespoke sized doorsets supplied were a mixture of non-fire rated and FD30 rated doorsets some with vision panels.

"Doorfit really made this simple for us to nominate them as the door supplier for our refit and full refurbishment of our Walmley clubhouse, they provided samples of the various finishes on offer talked through the options and provided us with a full schedule at a very competitive rate. The information and help provided to the contractor and to us was invaluable and their expert knowledge helped overcome some difficulties we encountered along the way and we have no hesitation in recommending their doorsets and ironmongery." Andy Mitchell, Chairman Walmley Golf Club.

Protus - a compliant solution for ASDA...

Complete doorsets prove to be the simplest route to compliance... Doorfit initially worked with Architects Whittam Cox and the client ASDA in formulating a robust but aesthetic standard specification for Ironmongery. It soon became evident that with the many contractors and specialist shopfitters involved in the stores and express projects, a complete Protus timber doorset and Ironmongery package was the route to ensuring a compliant solution.

Doorfit has subsequently supplied numerous projects up and down the country with Protus doorsets that include FD30 and FD60 doorsets with vision panels and acoustic rated doors for eye screening and pharmacy rooms. All doorsets were produced in ASDA's preferred laminate finish and primed, both in standard and bespoke sizes.
